

2017 Pesticide Application Clinics

The University of Arkansas Cooperative Extension Service is again hosting **Pesticide Application Clinics** across the delta this February and March. The clinics will be held:

- **Wednesday, February 22nd at the Men's Center in McGehee**
- **Thursday, February 23rd at the Rice Research Center in Stuttgart**
- **Tuesday, March 7th at ASU Newport in Newport**
- **Wednesday, March 8th at the Cotton Research Station in Marianna**
- **Thursday, March 9th at the Greene County Fairgrounds in Paragould**

Registration opens at **8:30 am** with large group sessions starting at 9:00. Producers and applicators alike are encouraged to attend to gain valuable information on how to be more productive and efficient in the field. The clinics are free and the day will end with a free lunch. Session topics and demonstrations are listed below.

- New herbicide technology update
- Identifying percent wear in nozzles
- Application tips for matching proper nozzles with chemistries
- Avoiding clean-out issues demonstration
- Electronics in applications demonstration
- Multiple spray table nozzle demonstrations

As in years past, we will be conducting FREE nozzle tests. Producers should bring a sample of nozzles from their equipment to be analyzed for % wear (3-5 nozzles and caps). This valuable tool has the potential to save a producer thousands of dollars in the upcoming spray season.

3 hours of CCA credit will be available.

For more information concerning these events please contact Jason Davis by phone at **(501)749-2077** or email at **jdavis@uaex.edu**.
