A Simple Comparison of Expected PLC (SCO Not Included) and ARC-CO payments

I Recommend
Producers final enrollment decision should be made using their assumptions & Texas A&M/University of Missouri FAPRI web-based farm bill decision aid.

If one (for any number of reasons) is simply not going to use a farm bill decision aid and wants to gain an increased understanding of their farm-by-farm and crop-by-crop options, this presentation and accompanying county tables may provide insight into ARC-CO and PLC (SCO-Not Included) program options.

University of Arkansas Division of Agriculture Farm Bill Web Site

Robert Coats
Professor - Economics
Department of Agricultural Economics and Agribusiness
Division of Agriculture, University of Arkansas
Assumptions of a simple comparison of expected PLC (SCO Not Included) and ARC-CO payments for all available crops assuming an assigned PLC Payment Yield.

• This is the average payment across many possible future realizations of prices and yields

The Output Is Generated by Texas A&M/Missouri FAPRI web-based farm bill decision aid ARC/PLC Evaluator for Generic Base

There are two key assumptions.

• First, we assume that you would have a PLC Payment Yield equal to the default value assigned by FSA in the absence of a yield history.
• Second, we assume expected prices equal to the latest FAPRI projections.
Output

This output reflects expected payments for PLC (SCO-Not Included) and ARC-CO.

Choosing ARC-CO precludes you from purchasing the crop insurance Supplemental Coverage Option (SCO).

Expected net SCO indemnities are not reflected in this output.

If the results for PLC and ARC-CO are similar for any given crop being considered, one may wish to further consider total possible PLC payments plus expected net SCO indemnities will exceed ARC-CO.

Producers final enrollment decision should be made using their assumptions & Texas A&M/University Missouri FAPRI web-based farm bill decision aid.
