

Installing Symantec Endpoint Protection on Windows

Determine what version of the client you will need to install (setup.exe or setup64.exe):

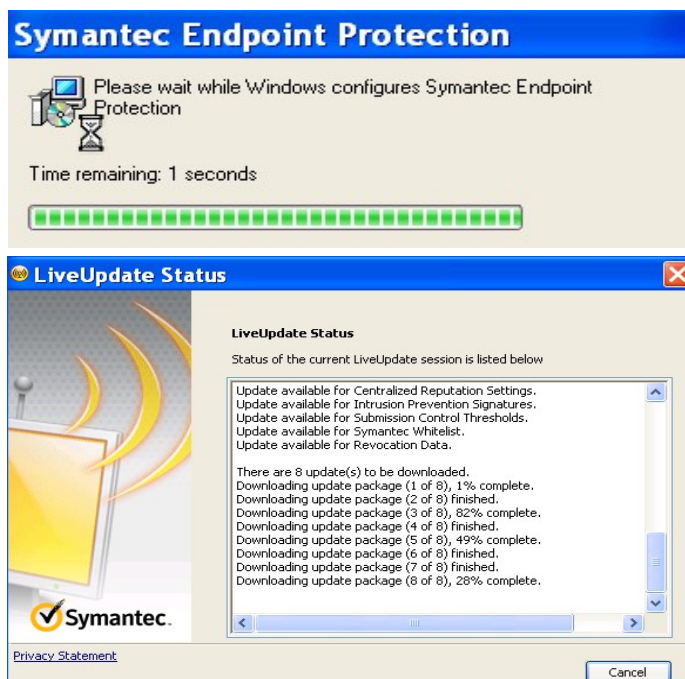

Windows 7 or Windows Vista:

1. Open System by clicking the **Start** button.
2. Right-clicking **Computer**, and then click on **Properties**.
3. Under System, you can view the system type.

Now that you know which Setup file to run:

1. Insert the DVD into your drive.
2. Open your File explorer and browse to the DVD.
3. Double click the installation file, either **setup.exe** (for majority of systems) or **setup64.exe** for 64bit computers.
4. After the software is installed the Live Update will start.
 - * Please note: The **Live Update Status** may take some time due to your Internet Speed.
 - * You have to wait until all Update Packages are finished.
5. Once the downloading and processing is complete click on Close.

6. After clicking on close you will be prompted to restart. Click on the Restart Now button.
7. Eject the DVD and you're done!
